SOLUTIONS FOR INDUSTRIAL ENVIRONMENTS

# INDUSTRIAL PACKS

NETWORK SECURITY | ENDPOINT SECURITY | DATA SECURITY

Each company has its own unique protection needs. That's why Stormshield has designed attractive, easy-to-use security service packs that fulfill specific purposes. Standard features include a next-generation firewall (NGFW) and an intrusion prevention system (IPS) based on Deep Packet Inspection.

These packs guarantee that protection systems considered essential to securing your activities are continually up-to-date. They also come with scalable, corrective software updates, product hardware maintenance, and access to technical support via our partner network and to the Stormshield Security Intelligence portal.

### INDUSTRIAL SECURITY PACK

This pack is specifically designed to protect industrial infrastructures that can be connected to the IT infrastructure. It is tailored to carefully filter and manage access to the operational network while ensuring in-depth inspection of industrial protocols.

The IPSec VPN connection feature in particular provides a secure access point for remote maintenance operations.

### INDUSTRIAL PLUS SECURITY PACK

Created for industrial companies that want complete control of their operational network's security, this pack pairs combines security features with a complete map of your industrial environment. This map displays all the PLCs, operator consoles, cameras, and other elements components that communicate over the operational network. The filtering, inspection, and VPN connection features are identical to those in the Industrial Security Pack.

The Stormshield Network Vulnerability Manager module provides a real-time visibility overview of vulnerabilities on the network or on the components deployed elements. Being able to discover communicating elements components within the operations system constitutes is a strategic asset for risk management.

### UPDATES

Industrial environment mapping and intrusion prevention are built on a signature database. An up-to-date signature database ensures an optimal level of security. Signatures can be updated at your convenience, during scheduled maintenance, or automatically on a regular basis. Regardless of the operating procedure, you can also connect your signature database to an update server within your installation.

.....

### Hardware Exchange

All of the security packs include hardware maintenance. This ensures the continuity of your activities in the event that of a product's hardware malfunctions developing a fault. Your product is simply exchanged and replaced with a similar product. Three service levels are available.

### Standard Exchange

Your product is exchanged after one of our after-sales service centers has received the defective device.

### Express Exchange

Your product is exchanged in advance. Sent as soon as the malfunction fault has been diagnosed by our support centers, the replacement product is delivered the next business day.<sup>1</sup>

### Serenity4All

With this service, you replace the product yourself once our support centers have diagnosed the malfunction fault.<sup>2</sup>

.....

<sup>1</sup> Contact us for the a list of participating countries and cities. For any diagnosis performed before 1 pm CET.

<sup>2</sup> Replacement products must be acquired in advance for this service.

## STORMSHIELD SECURITY INTELLIGENCE

Stormshield's teams are always on the lookout for ways to improve the protection provided by our products. The results of our continuous monitoring are published on secure customer and partner portals.

The Stormshield Security Intelligence portal lists all the vulnerabilities and attacks that have been analyzed by security teams and are currently handled by Stormshield Network Security solutions.

**This way, you have a complete visibility overview of the level of protection provided by your solution.**
