

MYDIGIPASS.COM[™]

MYDIGIPASS.COM offers website owners free strong authentication to conveniently secure access to password protected content.

ELIMINATE PASSWORD MANAGEMENT HASSLES

Millions of websites offer services or protected content for their user groups and require log-on access. People that are active on the internet may find it hard to manage their digital life and keep track of every username/ password combination they have created for all of these sites. Password management is not only a stumbling block for consumers, but can be for website owners as well. Offering support for password management requires resources and can be a time-consuming and costly affair.

To alleviate these obstacles, VASCO[®] launches MYDIGIPASS.COM. This is an online platform that allows web application owners to facilitate password management while adding an additional level of security to the access log-on procedure. VASCO allows website owners to freely integrate strong authentication using DIGIPASS[®] one-time passwords on their site for end-users to secure access to their services and content. By integrating MYDIGIPASS.COM website owners can reach out to the 100 million of users who already own a DIGIPASS client.

HOW DOES IT WORK?

To use the authentication feature, application owners need to integrate the MYDIGIPASS.COM connect button on their website. This button will allow the website owner to authenticate its user base via the MYDIGIPASS.COM platform. The website account will be linked to the MYDIGIPASS.COM account and will consequently allow the sharing of user attributes.

By clicking the button, end-users will activate an account on the MYDIGIPASS.COM platform that is linked to the account of the website owner. Once the accounts are linked, they will be benefiting from strong authentication by clicking the button when logging-on on the website of their choice.

To generate a one-time password to log on to the MYDIGIPASS.COM platform, end-users can use one of the hundred million dormant DIGIPASS in the field or download a mobile client on MYDIGIPASS.COM free of charge. When clicking the button, a pop-up authentication window will appear where the user can enter his one-time password generated by his DIGIPASS client.

Once the authentication is successful, users will be granted access to their web application account. As long as users are logged on to MYDIGIPASS.COM, he can make use of every website that is connected to the MYDIGIPASS.COM platform without the need to authenticate again.

AN EASY-TO-INTEGRATE PLATFORM

Integration of DIGIPASS technology into the application's website is a straightforward and simple task. VASCO has developed different tools to assist application providers with the integration. "developer.MYDIGIPASS.COM" is an integration tool specifically designed for application providers and guides them step by step through the integration process. The tool also contains a sandboxed environment to test the integration of the MYDIGIPASS.COM connect button into your application.

BENEFITS

- Ultimate convenience for website users. MYDIGIPASS.COM offers single sign-on for every application that is available on the platform and allows users to manage their account and user credentials in one central place
- Boost customer trust by implementing a stronger level of security free of charge. OTPs offer better security than traditional static passwords
- No provisioning and distribution of hardware authentication devices. End-users can use one of the hundred million dormant DIGIPASS in the field or can download a mobile authentication client from MYDIGIPASS.COM for free
- Easy integration with a step-by-step approach through the integration tool developer.MYDIGIPASS.COM
- Possibility to purchase branded authentication devices carrying your corporate logo and colors enhancing brand recognition
- Sharing of user attributes
- Reduce support and back-office costs by eliminating costs associated with password management
- Full-blown testing environment

Check developer.mydigipass.com for more information about the integration process and to test your web application in a sandboxed environment.

WHO CAN USE MYDIGIPASS.COM?

MYDIGIPASS.COM is available for every website owner that offers password protected content or services online.
