Secure your remote access with VASCO and SonicWALL

Combining SonicWALL E-Class NSA, TZ Series, SonicWALL Aventail E-Class SRA and SRA appliances with VASCO's DIGIPASS strong authentication enhances the security of your remote access, while remaining easy-to-use

When employees use their PC, they want to read e-mail, run applications, view documents and access files on the corporate network, and access websites. With the workforce becoming more mobile, the employees want to do all this anywhere at anytime. SSL VPN technology ensures employees have access to the corporate network. At the same time IT administrators need to make sure that corporate resources are accessed in a secure way while working from home or being on the road.

DIGIPASS strong authentication adds an additional security layer to remote access, preventing unauthorized users from accessing the corporate network assets.
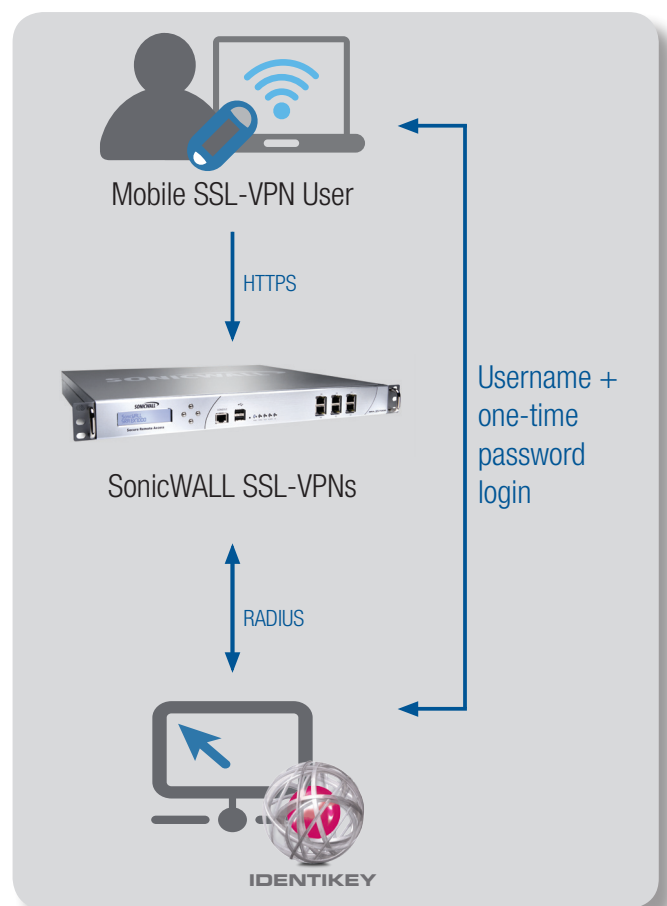

VASCO AND SONICWALL

By adding DIGIPASS strong authentication to SonicWALL E-Class, NSA and TZ Series, SonicWALL Aventail E-Class SRA and SRA appliances, customers have an easy-to-deploy remote access solution with enhanced security.

SonicWALL E-Class solutions represent a new generation of comprehensive solutions for network security, secure remote access, e-mail security and policy management. The SonicWALL Aventail E-Class Secure Remote Access (SRA) family of SSL VPNs delivers the easiest secure remote access solution for mobile enterprise.

VASCO DIGIPASS offers one-time password (OTP) technology to protect user login and ensures that only authenticated users get access.

HOW DOES IT WORK?

When adding VASCO DIGIPASS to SonicWALL, the end-user will be asked for an OTP generated by the VASCO DIGIPASS authenticator when remotely connecting to the corporate network. SonicWALL E-Class, NSA and TZ Series or SonicWALL Aventail E-Class SRA and SRA appliances will communicate with IDENTIKEY Server, VASCO's back-end authentication software, through RADIUS to validate the OTP. Upon successful validation of the OTP, the user is authenticated and the SonicWALL solution will set up the SSL VPN connection.

Mobile SSL-VPN User

Username + one-time password login

RADIUS

IDENTIKEY

The world's leading software company specializing in Internet Security

DIGIPASS BY VASCO

BENEFITS

Secure remote access

- Adding two-factor authentication to remote access
- Secure access to corporate network assets any time and anywhere
- Prevents unauthorized network access

Seamless integration

- Use of standard RADIUS protocol
- Leverages existing IT infrastructure
- Up and running in no time

Scalable

- More users can simply be added
- Can be reused to secure more/other business applications
- Caters for all your strong authentication needs

Low Total Cost of Ownership

- Little to no cost for user administration and support
- No additional infrastructure investments

FEATURES

- Dynamic User Registration
- Automatic DIGIPASS assignment
- DIGIPASS self registration
- CSV file import
- Active Directory, MS-Access, SQL or Oracle can be used as database
