

Backup Solutions from Pulseway

Pulseway Cloud Backup

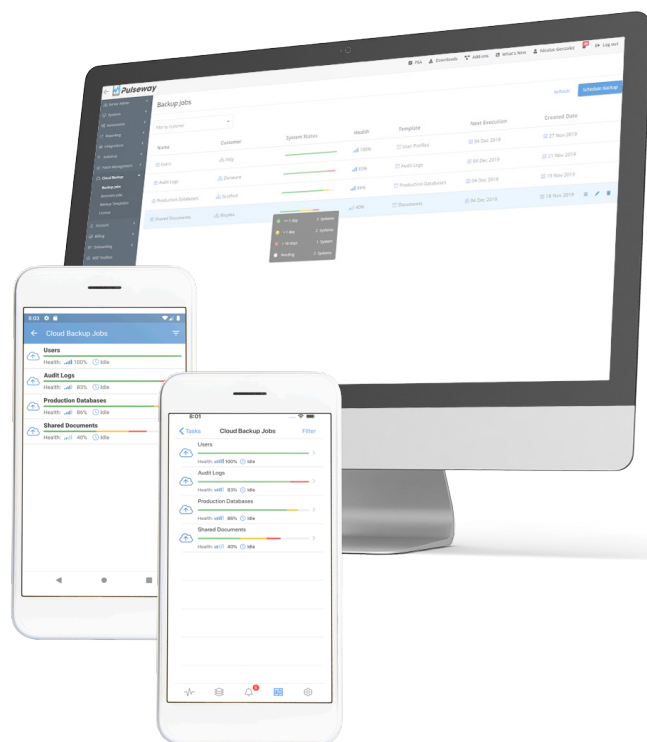

EASY CLOUD BACKUP AND RECOVERY FROM ANYWHERE FOR ENDPOINT DATA

Pulseway Cloud Backup is integrated with Pulseway RMM to give you a simple, cost-efficient way to back up laptops and PCs connected to corporate networks. Easy to install and deploy, Pulseway Cloud Backup can even be used via the Pulseway Mobile App.

ENTERPRISE-CLASS DATA PROTECTION ISN'T JUST FOR SERVERS ANYMORE

Protect PC and workstation data in a distributed environment without the hassle of providing local storage at every location. Pulseway Cloud Backup is the simplest way to backup from anywhere with internet connectivity — including WiFi — to protect endpoints regardless of their location.

Simply use Pulseway RMM to push agents to the fleet of Windows PCs or workstations you want to protect, and start backing up. Recovering data is simple too. You can initiate recovery from anywhere – even on your mobile device. Everyone gets hassle-free recovery, and no one needs to visit remote locations.

EVERYTHING YOU NEED FOR ONE SIMPLE PRICE

No matter what your customer puts on their laptop, backup is covered without any extra management or file selection from you. Pulseway Cloud Backup includes protection for workstations with up to 1 TB of data, providing more than enough cloud backup for even the largest endpoints. Plus, no fees to access data or restore files, and recovery is self-service. No surprises. No gotchas. Just simple, cost-efficient endpoint backup.

HANDS-OFF PROTECTION FOR WINDOWS ENDPOINTS

Once deployed, Pulseway Cloud Backup automatically backs up customer workstation data to a secure Cloud environment. No additional touches or IT management is required until data needs to be recovered, which is fast and easy.

Fully Integrated

Pulseway Cloud Backup is fully integrated into Pulseway RMM – without switching applications you can schedule backup and recovery jobs, view status and include backup tasks in your Pulseway workflows.

Happy Users

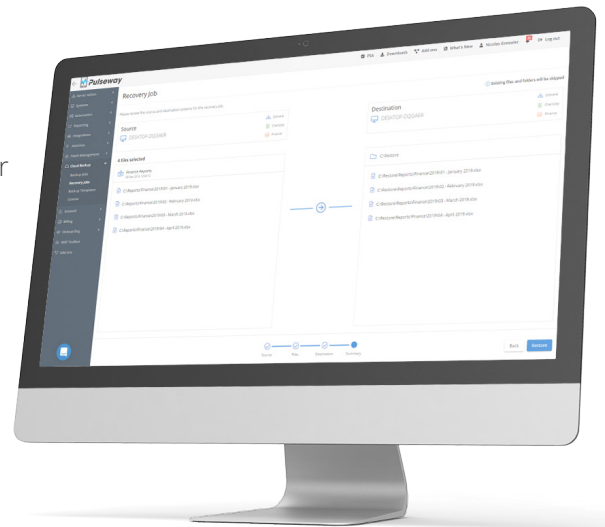

Protect critical data for Windows laptops and remote PCs, regardless of location. With Pulseway Cloud Backup, setup is painless, and data is safe and easily recovered.

Simple Deployment

Provide enterprise-class protection for endpoints in minutes. Simply use Pulseway RMM to deploy backup agents to your entire fleet and start backing up endpoint data.

Save Money, Reduce Complexity

The more distributed the workforce, the more distributed the data. Ensuring their data is backed up regularly is a complex task that needs additional local hardware. Get data loss protection for these endpoints without the need for local storage with Pulseway Cloud Backup.

Restore Data Where You Need It

Initiate recovery from any location with an internet connection, including WIFI. You can restore files to the original endpoint or to another machine device running our backup agent.

Mobile Access – Manage Backups Wherever You Are

Pulseway Cloud Backup is also available from the Pulseway Mobile App you are already familiar with. Schedule and monitor your backups from any mobile device.

Dashboard & Asset Health Checks

Health scores, both at the asset level and across your entire endpoint fleet, help you determine the vulnerability of your endpoints in a quick glance. Viewed through an intuitive and centralized dashboard, there is no need to crawl through large tables of data or decode your configuration.
