

## Backup Solutions from Pulseway

Spanning SaaS Backup for G-Suite, Office 365 and Salesforce

### PROTECT SAAS APPLICATION DATA FROM LOSS

SaaS application users are often surprised to find that their cloud-based data is vulnerable to data loss and must be managed with the same rigor as data stored on premises. According to a recent IDG Report:

- » 58% of users reported at least one SaaS data loss event in the past year
- » 95% of those surveyed believe SaaS providers can and will easily restore their lost data.

It's true; SaaS providers will restore data if the loss occurs on the provider's end. But what about data loss that occurs on the user's end—sync malfunctions or malicious ransomware and malware attacks, or purposeful deletion from disgruntled employees? SaaS providers have no way of telling whether deletion requests are legitimate or not, so they must assume that the requests are, and act accordingly.

Many users are surprised when they contact the provider after a data loss event and either can't get help or find that help comes with a steep price tag and long delays, leaving their organization unproductive and noncompliant.

To protect data from loss from these threats and maintain compliance with the increasing complexity of audit demands, companies require backup and recovery for their SaaS application data.

### Industry-Leading Cloud Data Protection

Spanning Backup delivers the most trusted, reliable backup and recovery for SaaS applications. Our powerful and easy-to-use solutions:

#### Provide peace of mind

with automated backup of your SaaS data.

#### Improve security and compliance

by minimizing the risk of data loss with enterprise-grade backup and recovery that aligns with industry best practices for data protection and governance requirements.

#### Reduce business continuity risk

with point-in-time recovery of email, files, folders, accounts, metadata, attachments and customizations. We'll have you back in business with just a few clicks.

**↓ Lower costs**

by providing unlimited storage and allowing more efficient use of IT resources by empowering end users to easily restore their own lost data.

**🔧 Provide advanced administration tools**

with complete status monitoring and actionable error reporting

**Backup Is One Thing. Restore Is Everything**

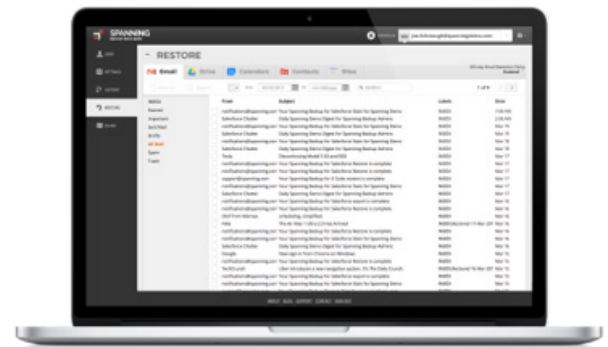

What good is having a backup of your data if you can't easily return files and information directly and immediately to your cloud applications? Spanning Backup is known for its market-leading restore capabilities, allowing even end users to quickly and easily recover any version of data from any point in time in just a few clicks. We have developed the most fine-tuned and user-friendly restore process available, allowing you to get back to work in a matter of seconds or minutes—not weeks or months—when data loss inevitably happens.
